

To order numbers with decimals

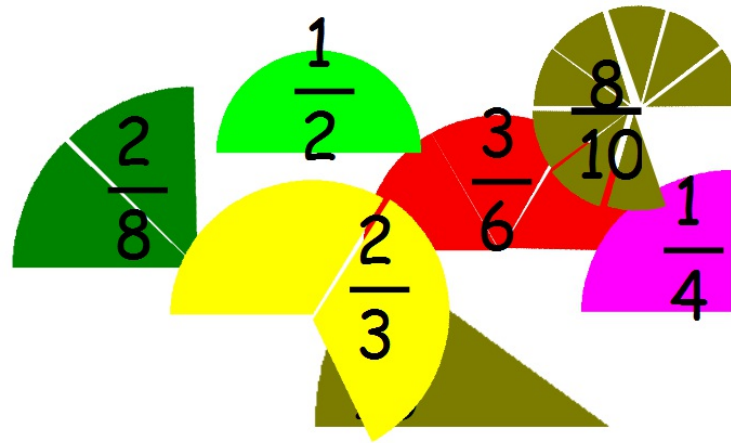

### Steps to Success

- 1) I can count in decimals 0.1 to 1
- 2) I can put decimals in order

Count in steps of 0.1

Count in steps of 0.1 starting at a whole number.

Where do these fractions go on the decimal line?

Decimals work in tenths.

H T U .  $\frac{1}{10}$

Then  $\frac{1}{100}$

It takes 10 hundredths to make a tenth.  $\frac{10}{100} = \frac{1}{10}$

And 100 hundredths to make 1.  $\frac{100}{100} = 1$

H T U .  $\frac{1}{10}$   $\frac{1}{100}$

$$H T U . \frac{1}{10} \frac{1}{100}$$

So, when ordering, always start at the biggest number (eg hundreds H). If it is the same, move to the next number. Remember, TENTHS are bigger than HUNDREDTHS.

So, when ordering, always start at the biggest number (eg hundreds H). If it is the same, move to the next number. Remember, TENTHS are bigger than HUNDREDTHS.
